30

- 1. A method of preventing substrate intensification effects when impregnating porous inorganic substrates, by first applying to the target substrate surface a primer composition, drying and curing the primer system, the substrate surface acquiring hydrophobic and oleophobic properties such that a drop of water applied thereto evaporates before it penetrates into the substrate and a drop of n-decane likewise applied thereto and left to act for 30 seconds can be removed, without the drops leaving dark spots on the substrate surface, and then carrying out the impregnation.
 - 2. A method as claimed in claim 1, wherein a primer is used which comprises at least one fluorofunctional component.
- 15 3. A method as claimed in claim 1 or 2, wherein a primer is used which comprises at least one fluoroalkylsilyl-functional component.
 - 4. A method as claimed in any one of claims 1 to 3, wherein a primer is used which comprises at least one cocondensate of at least one fluoroalkyl-functional silane and at least one aminoalkyl-functional silane.
 - 5. A method as claimed in any one of claims 1 to 4, wherein a primer is used which comprises at least one fluoroalkyl-modified acrylate polymer.
- 25 6. A method as claimed in any one of claims 1 to 5, wherein a primer is used which comprises at least one fluorofunctional acrylic copolymer.
 - 7. A method as claimed in any one of claims 1 to 6, wherein concentrated active substance systems or those diluted with water and/or alcohol are used as primers.
 - 8. A method as claimed in any one of claims 1 to 7, wherein a primer is used which

has a fluorofunctional active substance content of from 0.5% to 30% by weight.

9. A method as claimed in any one of claims 1 to 8, wherein the primer is applied by spraying, brushing, rolling or knife coating.

10. A method as claimed in any one of claims 1 to 9, wherein the primer is applied at a rate of from 25 to 200 g/m².

- 11. A method as claimed in any one of claims 1 to 10, wherein the primer system is
 10 dried and cured at a temperature of from 5 to 60 ℃ and at a relative atmospheric humidity of from 0% to 90%.
 - 12. A method as claimed in any one of claims 1 to 11, wherein the primer system is dried and cured for at least 4 hours before the impregnation is applied.
 - 13. A method as claimed in any one of claims 1 to 12, wherein the impregnating composition is applied by spraying, brushing, rolling or knife coating.
- 14. A method as claimed in any one of claims 1 to 13, wherein the spraying of thecompositions employed here is carried out by the airless or HVLP process.
 - 15. The use of fluoroalkyl-modified and/or fluorofunctional acrylate systems or fluoroalkyl-/aminoalkyl-/alkoxy- and/or hydroxy-functional siloxane systems or fluoroalkyl-functional silane and/or siloxane systems or mixtures of at least two of the aforementioned substances or solutions thereof in water, alcohol and/or solvents as primers for preventing substrate intensification effects in the case of architectural preservation by impregnation as set forth in any one of claims 1 to 14.

AMENDED CLAIMS

[received by the International Bureau on 21 April 2005 (21.04.2005); original claims 1 and 15 amended; remaining claims unchanged (2 pages)]

What is claimed is:

- 1. A method of preventing substrate discoloring effects when impregnating porous inorganic substrates, by first applying to the target substrate surface a primer composition, drying and curing the primer system, the substrate surface acquiring hydrophobic and oleophobic properties such that a drop of water applied thereto evaporates before it penetrates into the substrate and a drop of n-decane likewise applied thereto and left to act for 30 seconds can be removed, without the drops leaving dark spots on the substrate surface, and then carrying out the impregnation.
- 2. A method as claimed in claim 1, wherein a primer is used which comprises at least one fluorofunctional component.
- 3. A method as claimed in claim 1 or 2, wherein a primer is used which comprises at least one fluoroalkylsilyl-functional component.
- A method as claimed in any one of claims 1 to 3, wherein a primer is used which comprises at least one cocondensate of at least one fluoroalkyl-functional silane and at least one aminoalkyl-functional silane.
 - 5. A method as claimed in any one of claims 1 to 4, wherein a primer is used which comprises at least one fluoroalkyl-modified acrylate polymer.
- 25 6. A method as claimed in any one of claims 1 to 5, wherein a primer is used which comprises at least one fluorofunctional acrylic copolymer.
 - A method as claimed in any one of claims 1 to 6, wherein concentrated active substance systems or those diluted with water and/or alcohol are used as primers.
 - 8. A method as claimed in any one of claims 1 to 7, wherein a primer is used which has a fluorofunctional active substance content of from 0.5% to 30% by

AMENDED SHEET (ARTICLE 19)

weight.

- 9. A method as claimed in any one of claims 1 to 8, wherein the primer is applied by spraying, brushing, rolling or knife coating.
- 10. A method as claimed in any one of claims 1 to 9, wherein the primer is applied at a rate of from 25 to 200 g/m².
- 11. A method as claimed in any one of claims 1 to 10, wherein the primer system is dried and cured at a temperature of from 5 to 60°C and at a relative atmospheric humidity of from 0% to 90%.
 - 12. A method as claimed in any one of claims 1 to 11, wherein the primer system is dried and cured for at least 4 hours before the impregnation is applied.
 - 13. A method as claimed in any one of claims 1 to 12, wherein the impregnating composition is applied by spraying, brushing, rolling or knife coating.
- 14. A method as claimed in any one of claims 1 to 13, wherein the spraying of the compositions employed here is carried out by the airless or HVLP process.
 - 15. The use of fluoroalkyl-modified and/or fluorofunctional acrylate systems or fluoroalkyl-/aminoalkyl-/alkoxy- and/or hydroxy-functional siloxane systems or fluoroalkyl-functional silane and/or siloxane systems or mixtures of at least two of the aforementioned substances or solutions thereof in water, alcohol and/or solvents as primers for preventing substrate discoloring effects in the case of architectural preservation by impregnation as set forth in any one of claims 1 to 14.
